

SURGE PROTECTOR SERVICE

I hereby authorize Amicalola EMC to install a meter socket surge protector in my meter base and bill me **\$4.50 per month** for the service. Service will be discontinued and the device will be removed upon notification from me to Amicalola EMC.

Amicalola EMC does not guarantee that this device will prevent customer's appliances or equipment from being damaged or destroyed by a voltage surge. **No warranty is offered with this service.**

Testing confirms that whole house surge suppressors reduce voltage surges significantly. Nearby high intensity lightning strikes can cause voltage surges large enough to cause damage. This can occur without destroying the protector. Extremely large lightning strikes will likely also damage the meter socket protector.

Amicalola EMC recommends a two stage surge protection scheme with additional plug in suppressors for equipment plugged into electric lines, cable TV, and telephone wires. Telephone, CATV, and electric grounds should all be bonded together and should enter the house at one location. All premise wiring should be in compliance with the National Electric Code and local codes.
